

## TSV - Grinding & Lapping Machine for Safety Valves

1/2" - 12"

- Absolute flat sealing surfaces
- In-Shop stationary mounting &
- In-Field portable mounting
- Easy handling and set-up
- Spring-loaded tool reception for fine adjustment of work pressure
- Self-cleaning abrasives
- Even distribution of lapping paste during lapping
- Cross-hatch & mirror surface finishes

In-Line Applications:

- with 3-jaw chuck mounting

In-Shop Set-Up:

- with machine stand and clamping table

- the stand folds flat for easier storage

Due to the geometry there are normally higher speeds on the outside diameter of the grinding surface than on the inside diameter, resulting in varied material removal and sealing surfaces that are uneven.

The use of eccentricity neutralizes the influence of the different cutting speeds. The result is a flat sealing surface.
